Personal Health Record
for Increased Patient Engagement

Personal Health Record (PHR) is a secure online system that gives users 24/7 access to and control over their healthcare data. In boosting patient-centricity, users share their real-time medical information with public or private healthcare providers or choose to keep their families in the loop. Overall, the system allows users to decide what, who and for how long to share their medical records.

PHR provides users with their medical histories and electronic health records flow, including past hospital visits and appointment schedules, for a complete health snapshot. In summary, it's like a database containing the information a patient may need.

So, what are the key elements PHR has for such a health monitoring level?

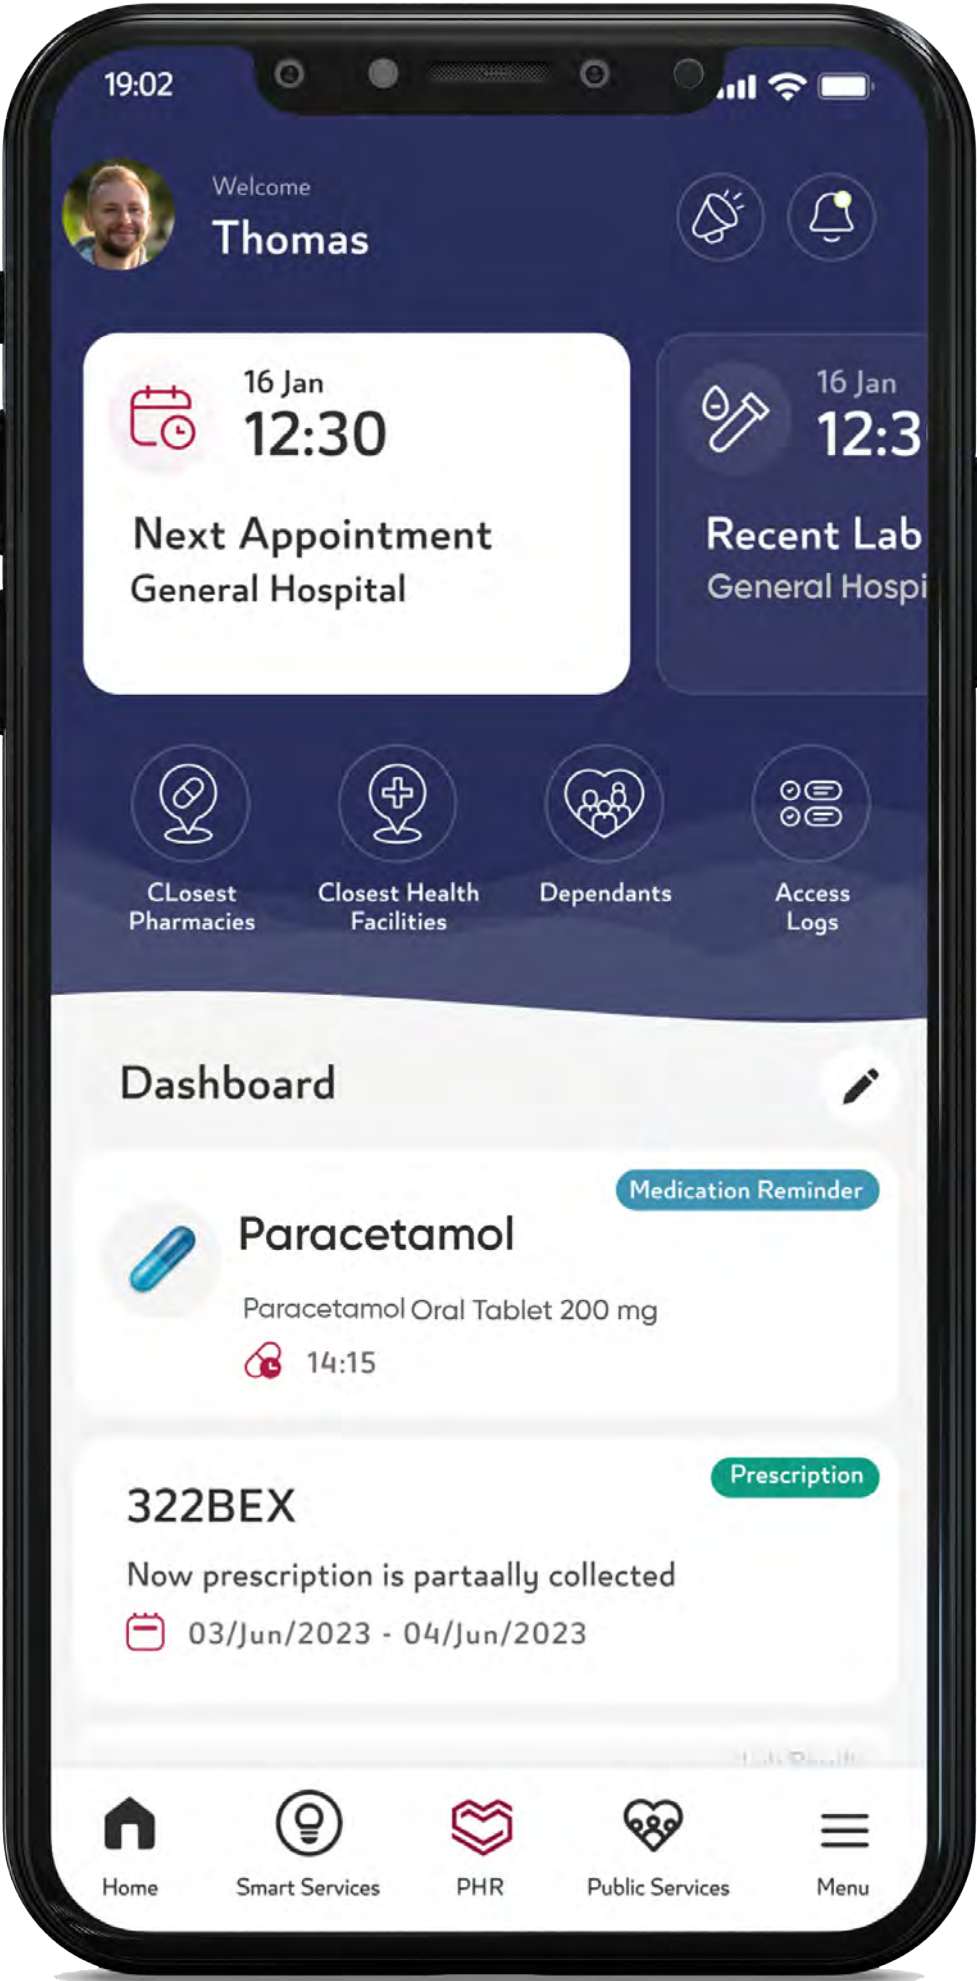

- Medical History
- Diagnoses & Diseases
- Lab Results
- Prescriptions & Medications
- Health Reports
- Allergies
- Donations

- Radiological Images
- Cardiovascular Disease Risk Calculator
- Patient and Family Member Notification
- Smart Assistant
- Emergency Assistance Button
- Nearest Hospitals
- Digital Vaccination Card and many more!

PHR performance looks promising!
Numbers are on our side;
let's see what the data indicates.

125M+
Patients

218K+
Physicians

74M+
Active Users

28K+
Integrated Healthcare Facilities

10B+
Health Records Processed

30+
Integrated Systems

We can create a future where healthcare IT centers on patients, offering personalized treatment plans powered by data for improved outcomes.
